FCC Class II Permissive Change

Manufacture:

10, 9th Floor, SOLiD Space, Pangyoyeok-ro 220, Bundang-gu, Seongnam-si, Gyeonggi-do, 463-400

SOLiD, Inc

Date of Issue: August 04, 2014

Test Site/Location:

HCT CO., LTD., 74, Seoicheon-ro 578beon-gil, Majang-myeon, Icheon-si, Gyeonggi-do, Korea

Report No.: HCT-R-1408-F003

FCC ID: APPLICANT:

W6U19P85C70L21A SOLiD, Inc

728 MHz ~ 757 MHz

FCC Model Name SC-MRU1900P850C-AC, SC-MRU1900P850C-DC,

SC-ARU700LTEAWS-AC, SC-ARU700LTEAWS-DC

Additional Model Name SC-MRU1900P850C-AC(N), SC-MRU1900P850C-DC(N)

SC-ARU700LTEAWS-AC(N), SC-ARU700LTEAWS-DC(N)

EUT Type: REPEATER

Frequency Ranges: 700 MHz LTE Band:

Cellular Band: 869 MHz ~ 894 MHz
PCS Band: 1930 MHz ~ 1995 MHz
AWS Band: 2110 MHz ~ 2155 MHz

AWS Band: 2110 MHz ~ 2155 MHz

Cellular Band:

700 MHz LTE Band: 0.25 W (24 dBm)
Cellular Band: 0.25 W (24 dBm)
PCS Band: 0.63 W (28 dBm)
AWS Band: 0.63 W (28 dBm)

Date of Test: July 18, 2014 ~ July 26, 2014

FCC Rules Part(s): CFR 47, Part 22, 24, 27

Engineering Statement:

Conducted Output Power:

The measurements shown in this report were made in accordance with the procedures indicated, and the emissions from this equipment were found to be within the limits applicable. I assume full responsibility for the accuracy and completeness of these measurements, and for the qualifications of all persons taking them. It is further stated that upon the basis of the measurements made, the equipment tested is capable of operation in accordance with the requirements of Part 22, 24, 27 of the FCC Rules under normal use and maintenance.

2. FACILITIES AND ACCREDITATIONS

2.1. FACILITIES

The SAC(Semi-Anechoic Chamber) and conducted measurement facility used to collect the radiated data are located at the 74, Seoicheon-ro 578beon-gil, Majang-myeon, Icheon-si, Gyeonggi-do, Korea. The site is constructed in conformance with the requirements of ANSI C63.4. (Version :2003) and CISPR Publication 22. Detailed description of test facility was submitted to the Commission and accepted dated June 21, 2011 (Registration Number: 90661).

2.2. EQUIPMENT

Radiated emissions are measured with one or more of the following types of Linearly polarized antennas: tuned dipole, bi-conical, log periodic, bi-log, and/or ridged waveguide, horn. Spectrum analyzers with preselectors and quasi-peak detectors are used to perform radiated measurements.

Calibrated wideband preamplifiers, coaxial cables, and coaxial attenuators are also used for making measurements.

All receiving equipment conforms to CISPR Publication 16-1, "Radio Interference Measuring Apparatus and Measurement Methods."

F-01P-02-014 (Rev.00) FCC ID: W6U19P85C70L21A HCT CO., LTD

Report No.: HCT-R-1408-F003 MODEL: SC-MRU1900P850C-AC Page 6 of 273

3. TEST SUMMARY

3.1. STANDARDS

The following tests were conducted on a sample of the equipment for the purpose of demonstrating compliance with FCC Part22, 24, 27.

| Description | Reference | Results |
|--|-------------------------------------|-----------|
| Conducted RF Output Power | §2.1046; §22.913; §24.232; §27.50 | Compliant |
| Occupied Bandwidth | §2.1049 | Compliant |
| Spurious Emissions at Antenna Terminals | §2.1051, §22.917, §24.238, §27.53 | Compliant |
| Out of Band Rejection | KDB 935210 D03 v02r01 | Compliant |
| Radiated Spurious Emissions | §2.1053, §22.917, §24.238, §27.53 | Compliant |
| Frequency Stability | §2.1055, §22.355, § 24.235 , §27.54 | Compliant |

3.2. MODE OF OPERATION DURING THE TEST

The EUT was operated in a manner representative of the typical usage of the equipment.

During all testing, system components were manipulated within the confines of typical usage to maximize each emission.

The device does not supply antenna(s) with the system, so the dummy loads were connected to the RF output ports for radiated spurious emission testing.

QPSK was only selected and tested since it's the worst case configuration among all here modulations (QPSK, 16QAM, 64QAM).

6. RF OUTPUT POWER

Test Requirements:

- § 2.1046 Measurements required: RF power output:
- § 2.1046 (a) For transmitters other than single sideband, independent sideband and controlled carrier radiotelephone, power output shall be measured at the RF output terminals when the transmitter is adjusted in accordance with the tune-up procedure to give the values of current and voltage on the circuit elements specified in §2.1033(c)(8). The electrical characteristics of the radio frequency load attached to the output terminals when this test is made shall be stated.
- § 2.1046 (b) For single sideband, independent sideband, and single channel, controlled carrier radiotelephone transmitters, the procedure specified in paragraph (a) of this section shall be employed and, in addition, the transmitter shall be modulated during the test as specified and as applicable in § 2.1046 (b) (1-5). In all tests, the input level of the modulating signal shall be such as to develop rated peak envelope power or carrier power, as appropriate, for the transmitter.
- § 2.1046 (c) For measurements conducted pursuant to paragraphs (a) and (b) of this section, all calculations and methods used by the applicant for determining carrier power or peak envelope power, as appropriate, on the basis of measured power in the radio frequency load attached to the transmitter output terminals shall be shown. Under the test conditions specified, no components of the emission spectrum shall exceed the limits specified in the applicable rule parts as necessary for meeting occupied bandwidth or emission limitations.
- § 22.913 Effective radiated power limits. The effective radiated power (ERP) of transmitters in the Cellular Radiotelephone Service must not exceed the limits in this section.
- (a) Maximum ERP. In general, the effective radiated power (ERP) of base transmitters and cellular repeaters must not exceed 500 Watts. However, for those systems operating in areas more than 72 km (45 miles) from international borders that:
- (1) Are located in counties with population densities of 100 persons or fewer per square mile, based upon the most recently available population statistics from the Bureau of the Census; or,
- (2) Extend coverage on a secondary basis into cellular unserved areas, as those areas are defined in § 22.949, the ERP of base transmitters and cellular repeaters of such systems must not exceed 1000 Watts. The ERP of mobile transmitters and auxiliary test transmitters must not exceed 7 Watts.

Report No.: HCT-R-1408-F003 MODEL: SC-MRU1900P850C-AC Page 10 of 273

§ 24.232 Power and antenna height limits. (a) Base stations are limited to 1640 watts peak equivalent isotropically radiated power (EIRP) with an antenna height up to 300 meters HAAT, except as described in paragraph (b) below. See §24.53 for HAAT calculation method.

Base station antenna heights may exceed 300 meters with a corresponding reduction in power; see Table 1 of this section.

The service area boundary limit and microwave protection criteria specified in §24.236 and §24.237 apply.

§ 27.50 Power and antenna height limits.

- (d) The following power and antenna height requirements apply to stations transmitting in the 1710–1755 MHz and 2110–2155 MHz bands:
- (1) The power of each fixed or base station transmitting in the 2110–2155 MHz band and located in any county with population density of 100 or fewer persons per square mile, based upon the most recently available population statistics from the Bureau of the Census
- (2) The power of each fixed or base station transmitting in the 2110–2155 MHz band and situated in any geographic location other than that described in paragraph (d)(1) is limited to:
- (A) an equivalent isotropically radiated power (EIRP) of 1640 watts when transmitting with an emission bandwidth of 1 MHz or less;
- (B) an EIRP of 1640 watts/MHz when transmitting with an emission bandwidth greater than 1 MHz.
- (4) Fixed, mobile, and portable (hand-held) stations operating in the 1710–1755 MHz band are limited to 1 watt EIRP. Fixed stations operating in this band are limited to a maximum antenna height of 10 meters above ground. Mobile and portable stations operating in this band must employ a means for limiting power to the minimum necessary for successful communications.

§ 27.50 Power and antenna height limits.

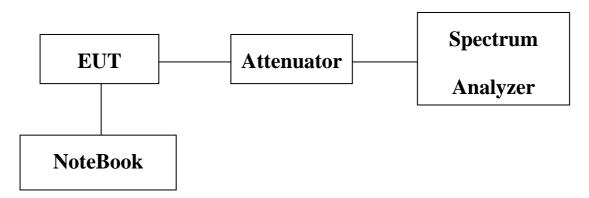

2) Fixed and base stations transmit- ting a signal in the 746–757 MHz, 758–763 MHz, 776–787 MHz, and 788–793 MHz bands with an emission bandwidth of 1 MHz or less must not exceed an ERP of 1000 watts and an antenna height of 305 m HAAT, except that antenna heights greater than 305 m HAAT are permitted if power levels are reduced below 1000 watts ERP in accordance with Table 1 of this section.

Report No.: HCT-R-1408-F003 MODEL: SC-MRU1900P850C-AC Page 11 of 273

Test Procedures:

As required by 47 CFR 2.1046, RF power output measurements were made at the RF output terminals using an attenuator and spectrum analyzer or power meter. This test was performed in all applicable modulations.

7. OCCUPIED BANDWIDTH

Test Requirement(s): § 2.1049 Measurements required: Occupied bandwidth:

The occupied bandwidth, that is the frequency bandwidth such that, below its lower and above its upper frequency limits, the mean powers radiated are each equal to 0.5 percent of the total mean power radiated by a given emission shall be measured under the specified conditions of § 2.1049 (a) through (i) as applicable.

Test Procedures: As required by 47 CFR 2.1049, occupied bandwidth measurements were made with a Spectrum Analyzer connected to the RF ports for both Uplink and Downlink The modulation characteristics of signal generator's carrier was measured first at a maximum RF level prescribed by the OEM. The signal generator was then connected to either the Uplink or Downlink input at the appropriate RF level. The resulting modulated signal through the EUT was measured and compared against the original signal.

Test Results:

The EUT complies with the requirements of this section.

700 MHz LTE Band

| Input Signal | Input Level (dBm) | Maximum Amp Gain |
|--------------|-------------------|------------------|
| LTE 5 MHz | DI . 20 E dD | DI . 45 dD |
| LTE 10 MHz | DL : -20.5 dBm | DL : 45 dB |

Cellular Band

| Input Signal | Input Level (dBm) | Maximum Amp Gain |
|--------------|-------------------|------------------|
| CDMA | | |
| WCDMA | DI . 00 5 dD | DI . 44 E -ID |
| GSM | DL : -20.5 dBm | DL : 44.5 dB |
| LTE 5 MHz | | |
